

Seamless Integration with Widest Range of Technologies

Imagine what you could accomplish if your technology systems worked together as well as your personnel.

The Horizon EME is built using standard technologies and an open design architecture. This enables simple and seamless two-way integration with any third-party technologies or applications that utilize modern software design principles. Just one more way your team at Symposium is making technology work for you.

Current Integrations Include:

- E-911 ANI/ALI interface (Phase I & II, NG911)
- Multiple RMS systems (FIREHOUSE®, FirePro, etc)
- Mobile Data (EM Mobile)
- Multiple wireless networks & GPS systems
- Various alarm monitoring hardware and sensor systems
- Medical dispatch (ProQA)
- Weather Alerting Systems
- Digital radio systems (Zetron, Motorola)
- GIS systems such as ESRI, MapInfo, MapPoint
- Visual imaging (Pictometry)
- Digital video and CCTV
- ODBC compliant corporate systems

Everything Working Together:

- Open Design
- Many Integrations
- Different Vendors, One System
- One Point of Access
- Simple and Easy
- Proven Track Record

“Symposium tied all our systems together and made it all work. The new capabilities are invaluable.”
